Froedge Supplies

Froedge carries a large inventory of industrial parts and supplies, including:
- Filters
- Chain
- Bearings
- Belts
- Sheaves
- Electric and hydraulic motors
- Variable frequency drives
- Hydraulic and pneumatic cylinders and valves
- Sprockets – cast, UHMW, split
- Bushings
- Gear reducers

From manufacturers like:

We also stock:
- Cylinder shaft, Metric shaft, High-tensile shaft
- Angle iron
- Channel iron
- Wide flange beam
- Flat stock
- Tubing
- Sheet & plate metal
- Non-ferrous metals and plastics.

CALL TODAY FOR LOW, LOW PRICES ON WIX FILTERS!

Custom Machining
Boring, Turning, Keying
- Sprockets
- Conveyor pulleys
- Spiral rollers
- Mandrel shafts
- CNC vertical machining & lathes
- Conventional and Wire EDM
- General machine shop & fabrication services
- Jigs, fixtures, machining & repairs

DISCOVER FROEDGE
MACHINE & SUPPLY

HERE TO MAKE IT WORK
We know you are considering our equipment because you want to be more competitive and productive, and we understand that every minute of downtime, every day of diminished product quality or production, means more than lost dollars to you. Your reputation, your effectiveness and ultimately your livelihood is closely coupled with the performance of the systems we build and our aim is to keep you at your best.

For the last 50 years, Froedge Machine has succeeded because we treat our customers like we’d want to be treated.

Wendall Froedge started what became Froedge Machine as a watch repair shop in 1962. A smart businessman, he saw opportunities in other markets, and took advantage of them by building a machine shop and selling industrial and agricultural supplies. His son Tom began working in the shop as a boy and developed a strong interest in design, going on to earn an engineering degree from the University of Kentucky. After graduation, Tom went to work for a large government contractor developing new alloys and materials for use in aerospace, but the lure of family and the Bluegrass State was strong, and he returned home in 1989 to work with his father. Tom brought new capabilities to the business, and in 1991, when a local sawmill requested, Wendall and Tom combined their engineering and machining talents to build their first stacker. In the decades since, dozens of stackers have been sold, and the Froedge product line has expanded with automated solutions for almost every lumber handling need.

“At Froedge, building quality equipment is more than just a competitive advantage – it’s part of our legacy and tradition. It’s more than a specification – it’s a moral requirement.”

— Tom Froedge

If you have lumber you need to move, count, grade, optimize, treat, stack, unstack, or package, we’ve got a solution!
